

## ACT REPORT.

After analysing the data, the following are the what I found out.

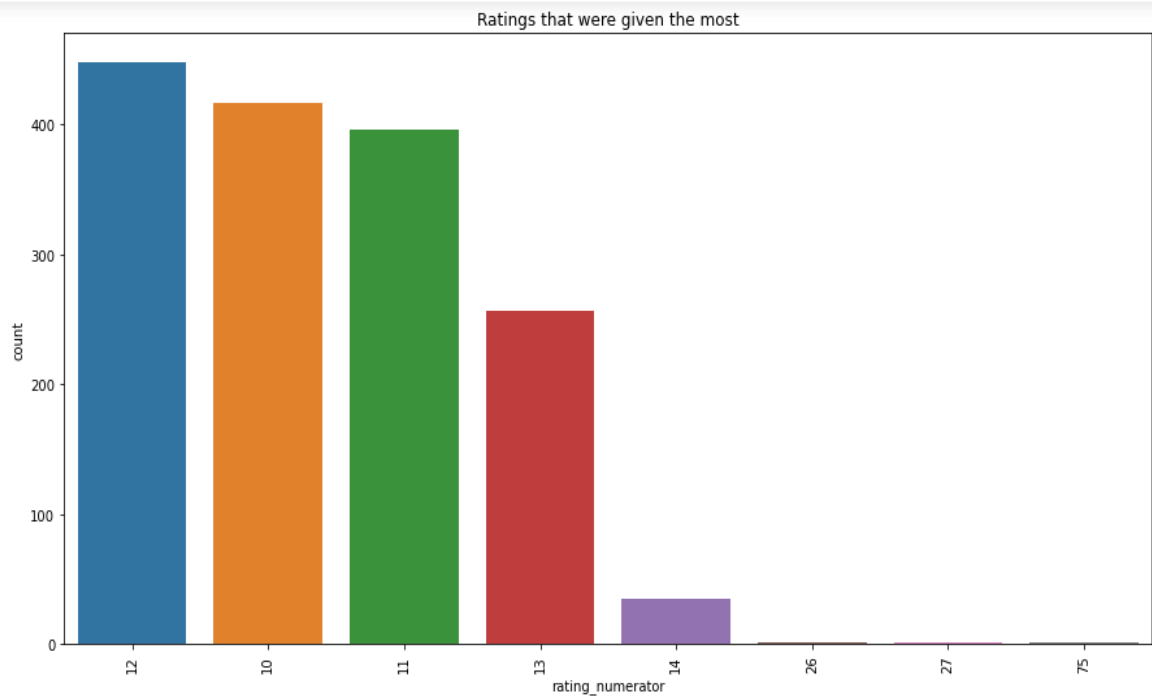

- 1) 2016 was the year when most people tweeted.

- 2) Most people tweeted on the 12<sup>th</sup> month i.e December

3) Most people gave a rating of 12

The relationship between favourite count and retweet count we found out to be positively linear. i.e. increase in favourite count increases the retweet count.
